

Ash Francq

Chicago, IL | 224-515-5740 | ash.francq@gmail.com | GitHub: [AFrancq](#)

TECHNICAL SKILLS

- **Languages:** Python, TypeScript, C++, Go
- **Frameworks & Tools:** Spark, Keras, TensorFlow, FastAi, PyTorch, Next.JS, React
- **Data Science:** Exploratory Data Analysis, Feature Engineering, Hypothesis Testing
- **Database & Infrastructure:** Docker, SQL/SQL Server, Azure, CosmosDB/NoSQL, Databricks
- **Other:** Git, Linux, System Design, Prompt Engineering

PROFESSIONAL SUMMARY

Experienced Software Engineer with a background in Applied Machine Learning research. Currently looking to expand my professional career to incorporate statistical learning models and the deployment of them in production settings. I am passionate about the ability to extract valuable insights from data along with the ability for algorithms to drive real organizational change. I offer an interdisciplinary approach to my work and will assist in all parts of the productionalization of statistical models. From data preprocessing and pipelining to model selection and deployment, I aim to identify uniquely valuable opportunities for growth and technology adoption in my roles.

EXPERIENCE

ABC Supply Co., Software Engineer – Enterprise Analytics | *June 2022 – Present*

- Owned the redesign and implementation of a row-level security system, reducing data processing times from 17 hours to 15 minutes
- Documented data infrastructure components, including system design specifications, dictionaries, and onboarding guides
- Led system design sessions and mentored junior engineers through code reviews
- Contributed to internal LLM tool development through prompt engineering support, integration testing, and model evaluation workflows
- Migrated an analytics platform from Angular and CosmosDB to React, Next.js, FastAPI, and SQL to fit within our enterprise technical architecture, serving over 100 dashboards and thousands of users
- Owned the migration of a ‘dispatch advisor’ process monitoring tool, allowing operations teams to generate shipping routes through our internal data science processes.

JPMorgan Chase & Co., Software Engineering Intern | *June 2021 – Aug 2021*

- Developed API endpoints for a NoSQL microservice using Java, SpringBoot, and Cassandra
- Created a bash script to split pull request differentials by feature tags
- Learned the fundamentals of software engineering in an industry setting

Illinois State University, Research Assistant – Applied ML | *Aug 2018 – May 2021*

- Built deep learning and machine learning models for time series forecasting. Achieved a 97.6% accuracy rate with LSTM RNNs using Keras and Tensorflow
- Prototyped codebase security flaw classification using FastAI, and PyTorch
- Performed feature engineering, data cleaning, exploratory analysis, hyperparameter tuning and model optimization to improve models and reduce overfitting with Jupyter Notebook
- Co-authored research paper published in a peer-reviewed journal:
“Advanced machine learning application for odor and corrosion control at a water resource recovery facility”

EDUCATION

University of Illinois Chicago – Computer Science | *Aug 2025 – Present*

Illinois State University – Applied Computer Science | *Aug 2018 – May 2021*
